

Laser Distance Measuring

Module 4 Series

Introduction

Egismos latest generation of Laser distance measurement modules offers measuring ranges up to 20 meters. The LDK Model 3 series are compact units with the smallest dimensions ever: only 48.9 x 26 x 13 mm. They are designed for users to easily connect the Laser measurement unit to a PC or an MCU through RS232 communication (UART TTL). The unit has a 1mm resolution and an accuracy of \pm 3.0mm along with a sampling rate up to 3 Hz.

The typical UART output uses a serial RS232 with a standard communication transmission protocol, which is the most common configuration for PC serial communications today. The common line speed has a Baud Rate of 19200.

Features

- * Distance measuring capacity.
- * RS-232 serial port connectivity.
- * Compact dimensions: 48.9 x 26 x 13 mm.

Product Code of Product

ltems	Model Number	Distance Measuring Range	Communication mode
LDM :	2M : Model 2	08: 8 meters	RS: RS-232
Laser Distance Measuring Module	3M : Model 3	20: 20 meters	BT: Bluetooth
	4M : Model 4	30: 30 meters	
	5M : Model 5	40: 40 meters	

Example: LDK-4M-40-RS

Specifications (T=25℃)

Items		
Model Name	LDK-4M-40-RS	
Measuring Range	0.03 ~ 40 meters	
Measure Accuracy	± 3.0 mm @ 25°C	
Measure Rate	1 ~ 3 Hz	
Mechanical Dimension	48.9x26x13 mm	
Distance Resolution	1 mm	
Starting Current	Min. 300mA, Typ. 500mA	
Operating Current	<150 mA	
Operating Voltage(DC)	2.5 ~ 3.3 V	
Transmission Mode	RS-232 TTL (UART)	
Transmission Interfaces	Female USB "B" connector	
Baud Rate	19200	
Operating Temperature	0~40 °C	
Storage Temperature	-25 ~ 60 °C	
Weight	~9g	
Laser Beam Size	2.5 x 5 mm @ 3 meter (FWHM)	
Laser Wavelength	620~690 nm	
Laser Safety	<1 mW (Class 2)	

Outline Dimensions

Date:2022.04.11

sales@egismos.com

FPC Pin Definition

PIN	Name	Function	Default	Description
1	PWREN	Digital Input	LOW	Power enable, active HIGH
2	TXD	Digital Output	HIGH	UART Transmitter
3	RXD	Digital Input	HIGH	URAT Receiver
4	GND			Power Ground
5	GND			Power Ground
6	VCC	Power		Power Supply
7	VCC	Power		Power Supply

Connection

Transfer Board Wiring Reference

Electrical Characteristics

Value	Symbol	Min	Typical	Max	Unit
Voltage Input	Vin	2.5	3.0	3,3	V
Current Input	lin	300	500	-	mA
UART Rx Logic 1	Vuth	3.0	3.3	3.4	V
UART Rx Logic 0	Vutl	-0.3	0	0.8	V
UART Tx Logic 1	Vurh	3.0	3.3	3.4	V
UART Tx Logic O	Vurl	-0.3	0	0.3	V
Power Enable Logic 1	Vpeh	3.0	3.3	Vin+0.3	V
Power Enable Logic 0	Vpel	-0.3	0	0.1	V

Absolute maximum ratings

Note: When exceeding one or more of the limiting values, permanent damages may be caused to the module!

Operating conditions	Min	Max	Unit
VCC	-0.3	5.5	V
GND	-	0	V
TXD	-0.3	VCC+0.3	V
RXD	-0.3	VCC+0.3	V
nRST	-0.3	4.0	V
Operating Temperature	0	+40	°C
Storage Temperature	-25	+60	°C

Please note that the normal operating voltage is DC 2.5~3.3V. Voltage inputs between DC 3.3~5.5V would not damage the module immediately but would damage the module over the long term. Don't input any voltage above DC 3.3V!

Operation Protocol

UART Interface

- Baud rate: 19200
- Start bit: 1 bit •
- Data bits: 8 bit
- Stop bit: 1 bit •
- Parity: none

Control flow chart

All communication commands are issued by the master board, the laser rangefinder module acts as the slave that answers to the master's request. The Ask & Answer flow through UART commands is shown in Figure

In its initial state, the module (slave) is in power-down mode before the master pulls the PWREN up. After PWREN is pulled up, and if nRST had been used before, please also remember to de-assert the nRST by pulling it up again. The module will take about 100 milliseconds to proceed to self-boot then the master transfers 1 byte data 0x55 to the slave. If it succeeds, the slave will reply 1 byte data to the master which is the slave own address (default address is 0x00). After this step, the communication between master and slave is established and now the master can send commands to the slave.

Frame

Bytes	0		1	2	3	4	5	6	7	8
Bits	[7:0]	[7]	[6:0]	[7:0]	[7:0]	[7:0]	[7:0]	[7:0]	[7:0]	[7:0]
Name	HEAD	RW	ADDRESS	REGI	STER	PAYLOAD	COUNT	PAYL	.OAD	CHECKSUM

HEAD: 0xAA start, 0xEE on error

RW: 0 the master writes to the slave, 1 the master reads from the slave

ADDRESS: only 7-bits; 0x00 to 0x7F ; default address 0x00 , reserved for the broadcast address 0x7F

REGISTER: may not be present when **RW** is 1 ; always starts with **zero**

PAYLOAD COUNT: count of payload bytes

PAYLOAD: response bytes

CHECKSUM: (RW+ADDRESS) bytes + REGISTER bytes + PAYLOAD COUNT bytes + all PAYLOAD bytes, ignoring overflows

LENGTH 9

The status code is 0x00 0x06 -- invalid measure result

see also the <u>Status Code</u>

Measurement Mode

Each measurement mode has 3 working attributes

Auto

In this mode, the module adjusts its measuring speed according to the environmental conditions of the laser and the target

Slow

The speed is set to its minimum to increase the measurement accuracy

Fast

The speed is set to its maximum, but the accuracy will be lower

Status Codes

Egismos

Laser Distance Measuring

Notice

- 1. User should always remember to turn OFF the power of the Laser Distance Measuring Kit when the measurement is complete, as keeping the power on might reduce the life-time of the Laser and of the light receiving element inside the Laser Distance Measuring Kit.
- **2.** Resistors of a few hundred Ohm are preferentially added between the pins UART Rx, UART Tx and the user's MCU in order to limit the voltage discrepancy between the two systems that would lead to current loss.
- Measure Accuracy ± 3.0 mm @ 25°C, room environment. The outdoor measurement accuracy can be roughly calculated using the following formula. Accuracy reference (mm) = (L-20) x C x 0.3 +2 L: measure distance (M), C: constant=1
- **4.** The measure rate changes automatically based on reflectance and environmental conditions.
- **5.** Continuous testing at low temperatures(0 $^{\circ}$ C) should not exceed 30 minutes.
- 6. Measurement targets should avoid direct light exposure.
