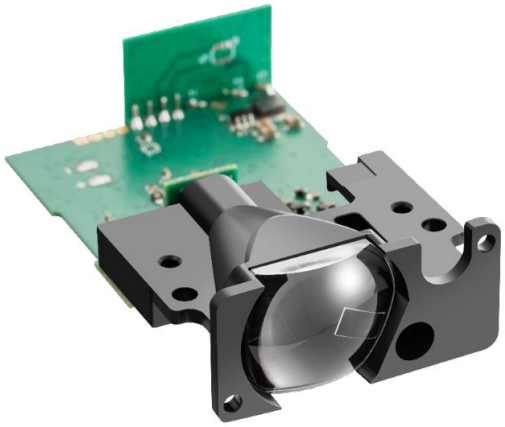
Module 5 Series



Introduction

Egismos latest generation of Laser distance measurement modules offers measuring ranges up to 80 meters. The LDK Model 5 series are compact units with the smallest dimensions ever: 68.2 x 40 x 18.2 mm. They are designed for users to easily connect the Laser measurement unit to a PC or an MCU through RS232 communication (UART TTL). The unit has a 1mm resolution and an accuracy of ±3.0mm along with a sampling rate up to 3 Hz.

The typical UART output uses a serial RS232 with a standard communication transmission protocol, which is the most common configuration for PC serial communications today. The common line speed has a Baud Rate of 19200.

Features

* Distance measuring capacity.
* RS-232 serial port connectivity.
* Compact dimensions: 68.2 x 40 x 18.2 mm.

Product Code of Product

Items	Model Number	Distance Measuring Range	Communication mode
LDM :	2M : Model 2	08: 8 meters	RS: RS-232
Laser Distance Measuring Module	3M : Model 3	20: 20 meters	BT: Bluetooth
	4M : Model 4	30: 30 meters	
	5M : Model 5	40: 40 meters

Laser Distance Measuring

Specifications (T=25℃)

Items	
Model Name	LDK-5M-80-RS
Measuring Range	0.03 ~ 80 meters
Measure Accuracy	± 3.0 mm @ 25°C
Measure Rate	1 ~ 3 Hz
Mechanical Dimension	68.2x40x18.2 mm
Distance Resolution	1 mm
Starting Current	Min. 300mA, Typ. 500mA
Operating Current	<150 mA
Operating Voltage(DC)	2.5 ~ 3.3 V
Transmission Mode	RS-232 TTL (UART)
Transmission Interfaces	Female USB "B" connector
Baud Rate	19200
Operating Temperature	0 ~ 40 ℃
Storage Temperature	-25 ~ 60 ℃
Weight	~16g
Laser Beam Size	2.5 x 5 mm @ 3 meter (FWHM)
Laser Wavelength	620~690 nm
Laser Safety	<1 mW (Class 2)

Absolute maximum ratings

Note: When exceeding one or more of the limiting values, permanent damages may be caused to the module!

Operating conditions	Min	Max	Unit
VCC	-0.3	5.5	V
GND	-	0	V
TXD	-0.3	VCC+0.3	V
RXD	-0.3	VCC+0.3	V
nRST	-0.3	4.0	V
Operating Temperature	0	+40	℃
Storage Temperature	-25	+60	℃

Please note that the normal operating voltage is DC 2.5~3.3V. Voltage inputs between DC 3.3~5.5V would not damage the module immediately but would damage the module over the long term. Don't input any voltage above DC 3.3V!

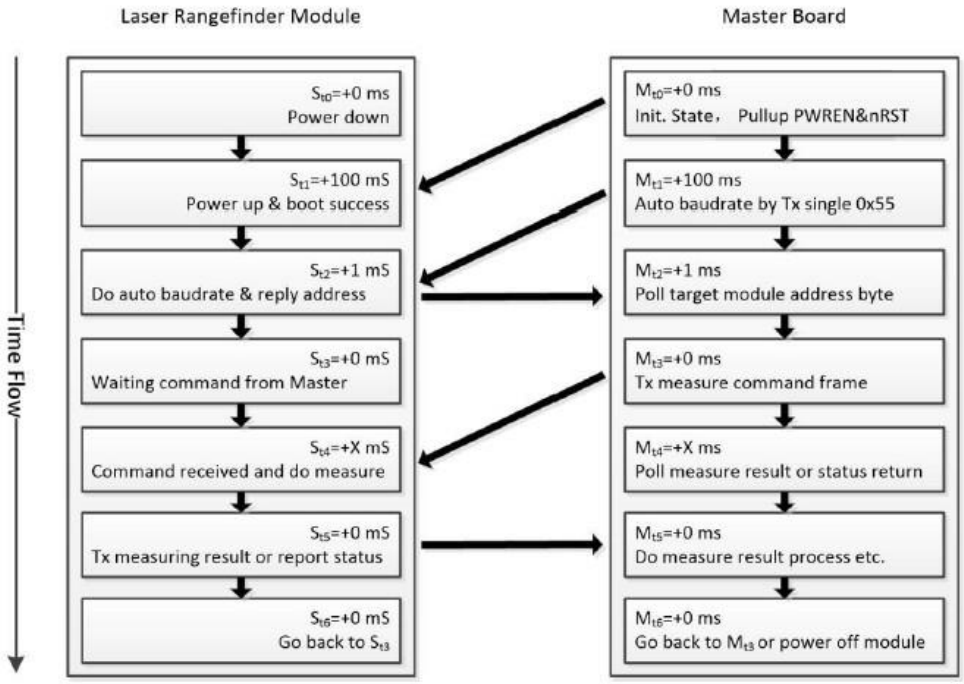
- Start bit: 1 bit
- Data bits: 8 bit
- Stop bit: 1 bit
- Parity: none

Control flow chart

All communication commands are issued by the master board, the laser rangefinder module acts as the slave that answers to the master's request. The Ask & Answer flow through UART commands is shown in Figure



In its initial state, the module (slave) is in power-down mode before the master pulls the PWREN up. After PWREN is pulled up, and if nRST had been used before, please also remember to de-assert the nRST by pulling it up again. The module will take about 100 milliseconds to proceed to self-boot then the master transfers 1 byte data 0x55 to the slave. If it succeeds, the slave will reply 1 byte data to the master which is the slave own address (default address is 0x00). After this step, the communication between master and slave is established and now the master can send commands to the slave.

Measurement Mode

Each measurement mode has 3 working attributes

- **Auto**

  In this mode, the module adjusts its measuring speed according to the environmental conditions of the laser and the target

- **Slow**

  The speed is set to its minimum to increase the measurement accuracy

- **Fast**

  The speed is set to its maximum, but the accuracy will be lower

Status Codes

Notice

1. User should always remember to turn OFF the power of the Laser Distance Measuring Kit when the measurement is complete, as keeping the power on might reduce the life-time of the Laser and of the light receiving element inside the Laser Distance Measuring Kit.
2. Resistors of a few hundred Ohm are preferentially added between the pins UART Rx, UART Tx and the user's MCU in order to limit the voltage discrepancy between the two systems that would lead to current loss.
3. Measure Accuracy ± 3.0 mm @ 25°C, room environment.
   The outdoor measurement accuracy can be roughly calculated using the following formula.
   Accuracy reference (mm) = (L-20) x C x 0.3 +2
   L: measure distance (M), C: constant=1
4. The measure rate changes automatically based on reflectance and environmental conditions.
5. Continuous testing at low temperatures(0℃) should not exceed 30 minutes.
6. Measurement targets should avoid direct light exposure.
